Back to AutoCAD Product Key and CAD Autodesk provides AutoCAD for both the design and drafting market. The history of AutoCAD begins in 1977 when Tim Clark and his team at Wavefront Associates began work on the now legendary "Two Minute Papers". This paper defined the process of creating a solid model of a building out of a series of drawings. He began by drawing a sketch. Then he sketched out a 2D sketch. He then added windows and doors. He then drew and printed out a detail of a 2D window. He repeated this process for all of the windows on the roof. He then added the details of the roof and the windows on the windows, and continued to print the drawings. After completing the 2D drawings, he added detail drawings to show each window and door as 3D, and then printed the 3D model. At this point, he drew a paper cutout of the model, folded the paper, and placed it inside his sketch. He then started working on the next model. After several months of writing a software program, he gave a presentation about his process. He was immediately hired by Wavefront Associates. Autodesk acquired the rights to the Two Minute Papers program in 1985 and added it as a standalone product. The name of the new product was AutoCAD. What is AutoCAD? AutoCAD is an acronym for Autocadulousness Diabolical Linearized Cadautic Dilettante Sketching of Doodles. AutoCAD is a powerful, easy-to-use, 2D and 3D computer-aided design software application for creating and editing 2D drawings and 3D models. AutoCAD is also available as a mobile and web app. CAD stands for Computer-Aided Drafting. CAD originated with the Selectograph, a CAD/CAM computer-aided design (CAD/CAM) system introduced in 1956 by the Pratt & Whitney Aircraft division of United Technologies. Pratt & Whitney also made the original "Selectograph" that was sold to an engineer, who added all of the extra features to make it a CAD system. The name was later shortened to CAD. What are the different functions of AutoCAD? AutoCAD is the first CAD software to give you many common drafting features. Because of this, people often use the term "AutoC

Code for Critical Thinking - mijail ====== bootload Curious how _domain specific_ this thinking is. Why does the software industry need Critical Thinking? I would imagine that if software industry had to think like a movie industry (unmanned industry) then we'd find the same traits in the development teams. Maybe the thinking is the same, but the tools (code) is different? ~~~ mijail Thanks. Yes, I'm guessing some of the tools may be the same. But the way the software industry is structured, the way the problems are and the way people approach them, make it very different. I don't really agree with the assumption that the software industry has the same problems as the movie industry. On your last point, I think you are right. The software industry is probably more like an engineering one where the domain is not necessarily known at inception. It's more like we are building things that last longer, or are more complicated. ~~~ bootload _"... But the way the software industry is structured, the way the problems are and the way people approach them, make it very different. I don't really agree with the assumption that the software industry has the same problems as the movie industry...."_ Agreed, this is what got me thinking about the article. If you're working in the same domain all the time, then you know the domain. Of course there are strategies and tactics to deal with the complications, complexities and unknowns. But that isn't critical thinking. In the software world we want to get to a place of having more options with less work. We want to reduce complexity. Critical thinking is not limited to one domain. It's thinking about a problem in
